

The Car of the Future by Renowned Environmentalist

Earthship Corp, a not-for-profit organization is proud to announce and invite you to a historic date for the future of Indiana & America. On Wed, March 18, 2009 at the Carmel Clay Public Library at 7pm, Vic Cook (musician, artist, teacher, environmentalist, architect, inventor, visionary and philosopher) will announce his commitment to build a prototype of his car of the future during his one hour presentation at the library. Vic will lay out the goals for the revolutionary car in detail and will be available for questions and media interviews.

The Leonardo of our time

More about Vic; His home, the 'Giant', has already made him a living legend. It has been visited by some 40,000 students & tourists. The home, handmade, built & designed by Vic, received the President's Award for tourism as well as the WRTV6 Leadership Award for his unselfish work on educating the masses on saving the environment. The home is not only green, but was nearly free to build and is nearly free to live in.

Quotes

"Father Earth. Profile: Vic Cook loved nature so much, he made it his home" Tracy Cumbay, INTake correspondent, Indianapolis Star.

"Remarkable, unique, an indication of creative genius. Amazing piece of work!" John Parke, PSCYHIATRIC SOCIAL WORKER

"A truly remarkable work of art that touches nearly every discipline of academic pursuit. It is a true paradise for the educational community." James W. Sutton, Principal, M.H.H.S.

Larger than Mt.Rushmore and the great Sphinx, the home (the Giant) is a virtual feast for the senses. Several T.V. documentaries and numerous print media stories have been seen by millions of people in primetime in the U.S. and around the world. While in great harmony with the environment, the home is also extremely high tech. It features a recording studio, home theater, movie production studio, a

model shop, a water purification system and has a stage for concerts, yet an extremely low average daily utility cost of \$ 1.50.

A little more about the car. Vic has, for the last 30 years, focused his attention on the two things that need to be improved in society; Houses and cars. Vic feels both are way too expensive and are extremely harmful to the environment.

THE CAR

The prototype will be built on a hillside in the dense forest near the Giant and will be a part of the educational tour of the Giant. What an extraordinary experience it will be for the student of any age to see

the car of the future being built by one man with a small team of people using the latest in high-tech tools, computers and other devices all powered off the sun. The car, when it is made available to the public, will not be built in a factory; it will be built in a small franchise operation by two people in a day. They will then market and sell the car.

The car will be a totally new kind of electric hybrid designed to generate an extraordinary amount of electric energy as it moves. This energy will not only power the car, but also the home of the owners. Most importantly, it will be next to impossible to be injured in any kind of crash.

Earthship was formed as an educational and charitable organization twenty years ago to help Vic in his monumental quest to really improve society.

Come and experience this extraordinary man and his visions in person March 18, 2009 at the Carmel Clay Public Library, 55 4th Ave. SE, Carmel, IN 46032 at 7:00 pm
